Building Plan No. 17/21/22

Detailed Numerical Solution

Problem: A rectangular area of 100 ft by 100 ft is divided into four equal parts by two perpendicular lines. Find the area of one of the four parts.

Solution: The area of the rectangle is 100 ft by 100 ft, which is 10,000 sq ft. The area is divided into four equal parts by two perpendicular lines. Therefore, the area of one of the four parts is 10,000 sq ft divided by 4, which is 2,500 sq ft.
