Figure 1. A representative example of a 1000-iteration MCMC trace plot for the parameter β_1 in the model $\log(\text{mean}) = \beta_0 + \beta_1 \text{Age}$. The trace plot shows the value of β_1 for each iteration, with the mean and standard deviation of the trace plot indicated by the horizontal line and the vertical line, respectively.

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The concentration of the *Agrobacterium* suspension was 10⁶ cells/ml (a), 10⁷ cells/ml (b), 10⁸ cells/ml (c), and 10⁹ cells/ml (d). The concentration of the *Agrobacterium* suspension was 10⁶ cells/ml (a), 10⁷ cells/ml (b), 10⁸ cells/ml (c), and 10⁹ cells/ml (d).
